

Collaborate and Manage Content with SharePoint

GNet Group's Areas of SharePoint Expertise Include:

Business-Critical SharePoint Backed by our participation in Microsoft's exclusive Business-Critical SharePoint (BCSP) Partner Program, our BCSP solutions make it possible for businesses to connect and use vital information from siloed systems to increase transparency, enhance team collaboration and drive more efficient business processes, while also maximizing the value and boosting user adoption of their existing IT investments.

Digital Marketing Our digital marketing practice is actively helping our clients leverage SharePoint to improve their customer engagements. With unique solution assets and proven customer success, we're a standout in this digital marketing space. One unique asset is GNet Group's SightN2 Digital Marketing which is a pre-built digital marketing solution that enables marketers to use advanced analytics to measure and manage the effectiveness of their digital marketing spend.

Governance and Planning We work with each customer to create a governance model, an implementation roadmap, and infrastructure requirements, each of which are dovetailed to ensure the solution strategy is aligned with business requirements and established usability guidelines.

Sites Our expertise of SharePoint sites extends across intranet, extranet and Internet sites. We've implemented SharePoint solutions that bring users together from across the organization to share information, data and expertise. SharePoint delivers in great usability, personalized experiences and a single infrastructure that saves valuable time and dollars for organizations.

Forms, Workflows and Automation Forms and workflows automation allows businesses to manage and integrate information, while gaining visibility into business processes in order to increase efficiency. GNet Group has helped several organizations automate their paper-based forms and business processes by developing workflows around key business activities.

Deployment and Infrastructure Management With the roadmap created in the governance and planning phase, GNet Group is able to successfully begin the implementation of the SharePoint infrastructure and software installation. Further, the governance policies and processes begin to be implemented and managed. Our deployment services include Hybrid deployments, as well as Office 365 integrations

Record Management Our services for record management help organizations increase productivity and information value through consolidation, while driving compliance and reducing risk across the organization.

Application Development GNet Group leverages the Microsoft .NET platform and development tools for building applications that enhance user experiences, provide seamless and secure communication, and provide abilities for modeling a range of business processes.

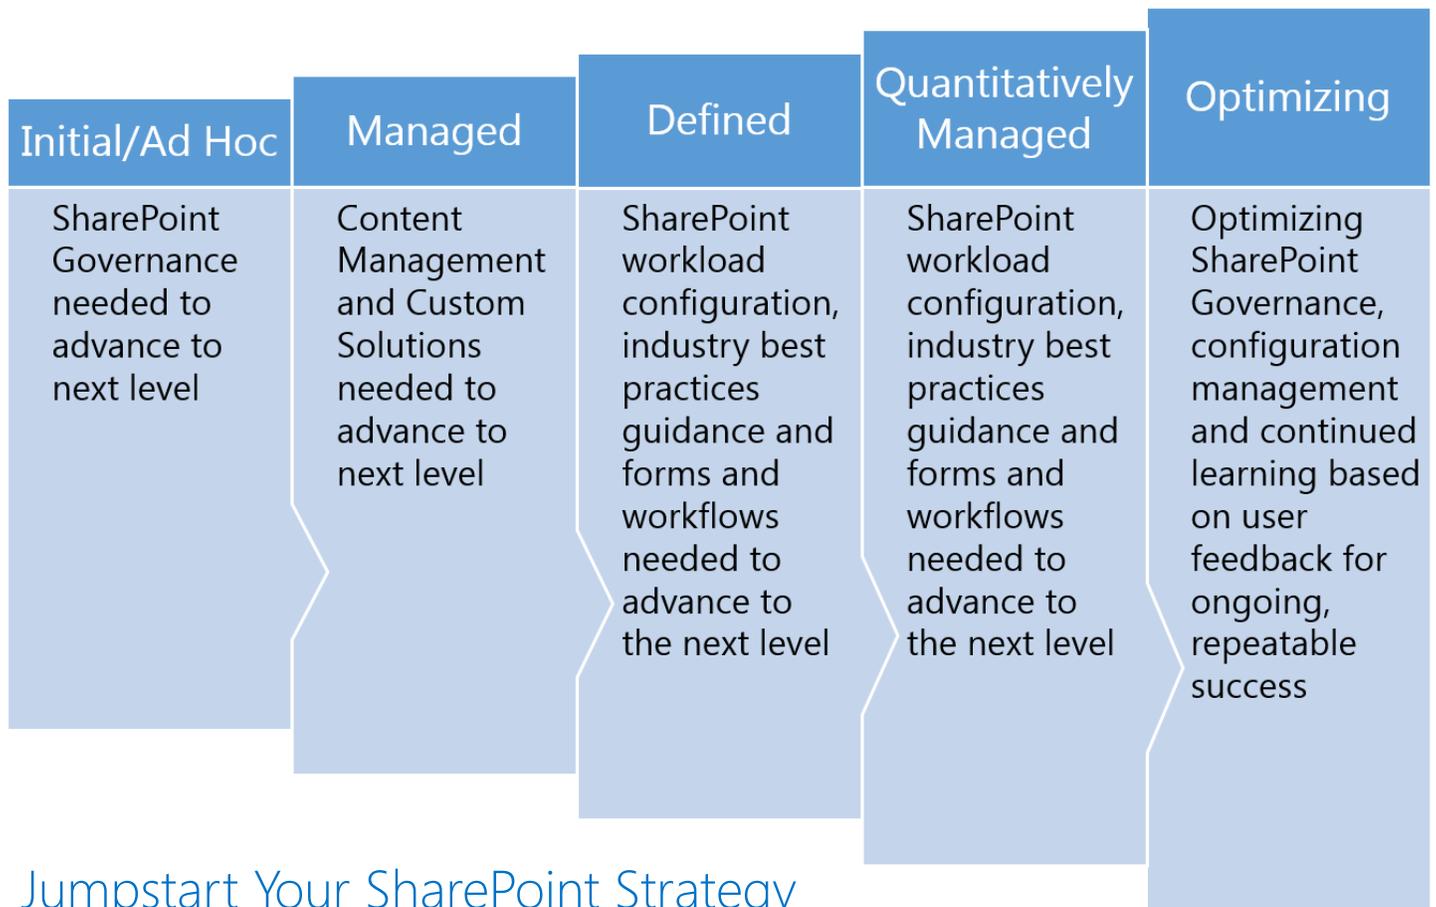

Enterprise Social Organizations are transforming the way people work together with Yammer and Office 365. Engage, collaborate and innovate with the experiences people want and the platform IT needs.

eDiscovery SharePoint Server 2013 introduces the *eDiscovery Center*, a new type of site collection that serves as a portal for managing eDiscovery cases. From this central location you can discover content in the SharePoint farm, Exchange Server 2013, on file shares, and in other SharePoint farms.

Achieve and maintain a SharePoint maturity model

Jumpstart Your SharePoint Strategy
